Diagram 1

Diagram 1 shows the connection of the motor to the power supply.

The motor is connected to the power supply through a switch.

The switch is connected to the power supply through a fuse.

The fuse is connected to the power supply through a circuit breaker.

The circuit breaker is connected to the power supply through a transformer.

The transformer is connected to the power supply through a rectifier.

The rectifier is connected to the power supply through a diode.

The diode is connected to the power supply through a capacitor.

The capacitor is connected to the power supply through an inductor.

The inductor is connected to the power supply through a resistor.

The resistor is connected to the power supply through a diode.

The diode is connected to the power supply through a capacitor.

The capacitor is connected to the power supply through an inductor.

The inductor is connected to the power supply through a resistor.

The resistor is connected to the power supply through a diode.

The diode is connected to the power supply through a capacitor.

The capacitor is connected to the power supply through an inductor.

The inductor is connected to the power supply through a resistor.

The resistor is connected to the power supply through a diode.

The diode is connected to the power supply through a capacitor.

The capacitor is connected to the power supply through an inductor.

The inductor is connected to the power supply through a resistor.

The resistor is connected to the power supply through a diode.

The diode is connected to the power supply through a capacitor.

The capacitor is connected to the power supply through an inductor.

The inductor is connected to the power supply through a resistor.

The resistor is connected to the power supply through a diode.

The diode is connected to the power supply through a capacitor.

The capacitor is connected to the power supply through an inductor.

The inductor is connected to the power supply through a resistor.

The resistor is connected to the power supply through a diode.

The diode is connected to the power supply through a capacitor.

The capacitor is connected to the power supply through an inductor.

The inductor is connected to the power supply through a resistor.

The resistor is connected to the power supply through a diode.

The diode is connected to the power supply through a capacitor.

The capacitor is connected to the power supply through an inductor.

The inductor is connected to the power supply through a resistor.

The resistor is connected to the power supply through a diode.

TYPE
PUMP, 1/2 HP
