

Patching arrangement using typical coaxial cable assembly

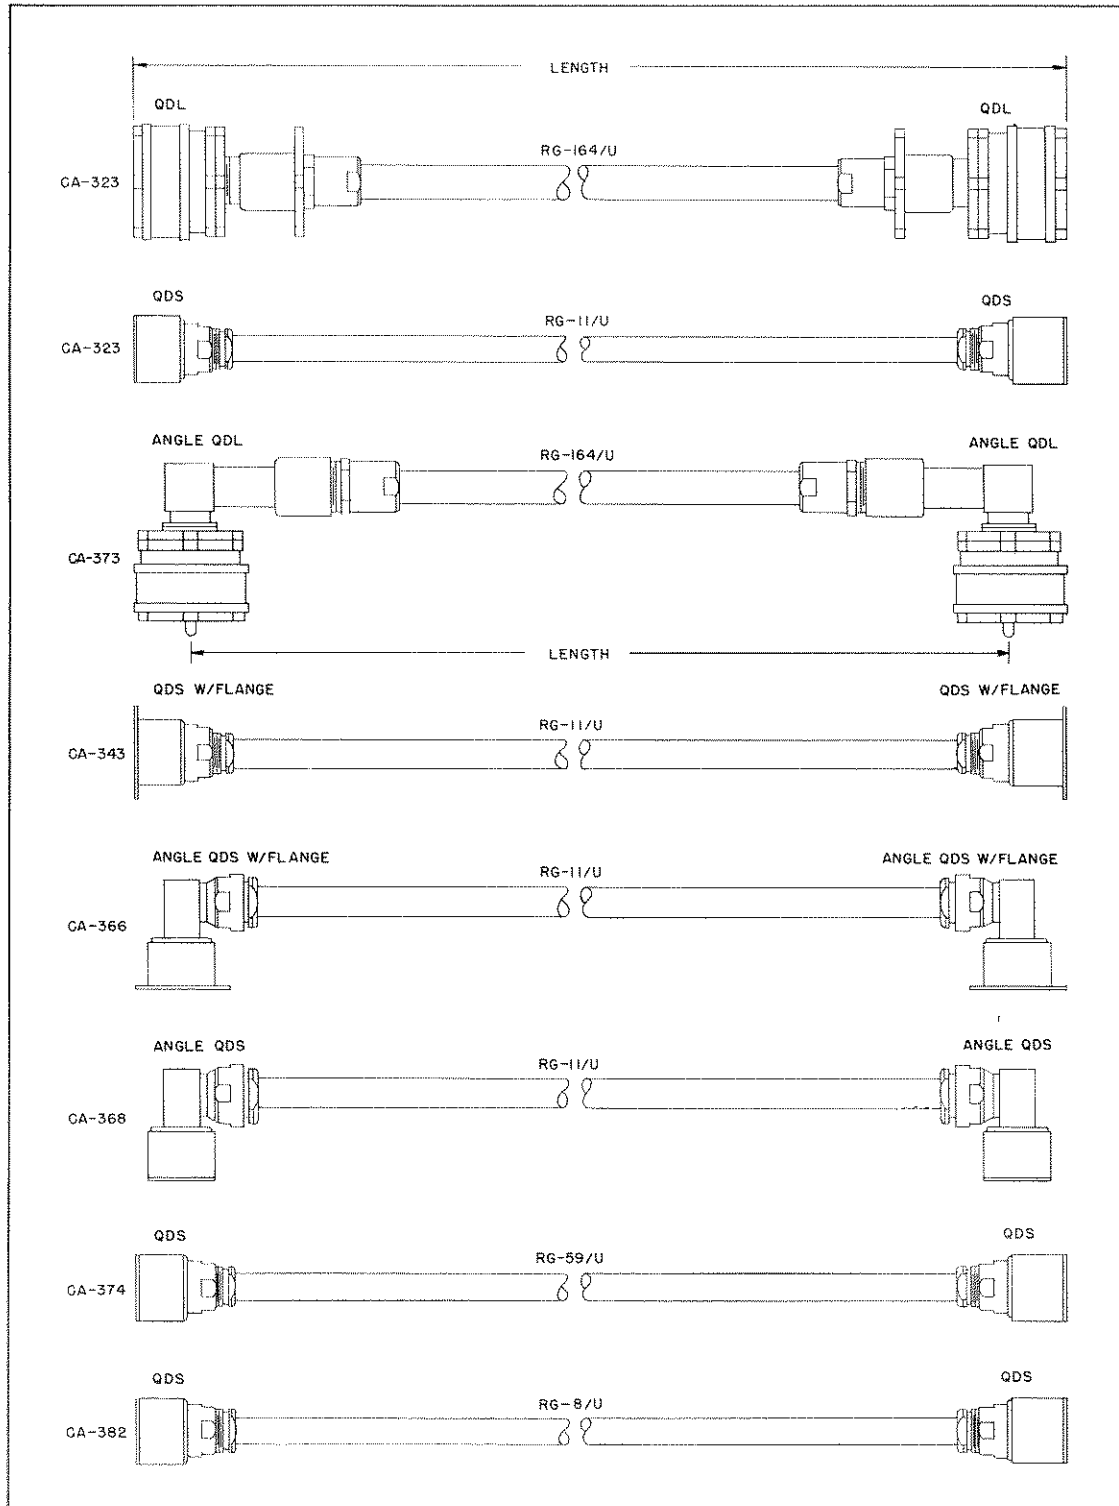

TMC manufactures this series of length-to-order cable assemblies for those requiring coaxial RF patch cables with QDS (quick disconnect small) or QDL (quick disconnect large) connectors. They are recommended for use with the TMC models QDP, SPP, and BJP Patch Panels (see Sales Service Bulletins 197, 210, and 223) and all other equipments requiring the use of similar cable types.

Angle connectors are furnished with CA-373, CA-366, and CA-368 to relieve sharp cable bends and to allow neater installations where practicable. See the reverse page for cables currently available.

As illustrated, CA-323 makes allowance for the use of either QDS or QDL plugs while the other cables allow for only one or the other type.
